Chapter 1

Introduction

This dissertation is about case competition, a situation in which two cases are assigned but only one of them surfaces. One of the constructions in which case competition appears is relative clauses that lack a head, i.e. headless relatives.

I show that one aspect about case competition in headless relatives holds for all languages (under discussion here at least). That is, there is a fixed order which decides which case wins the competition. Another aspect of case competition in headless relatives differs per language. That is, whether the competition takes place to begin with. I connect this variable to the morphology of the language in question.

This phenomenon has been described as some special property of a few special languages. Therefore, language-specific rules have been postulated to account for the data. My goal is to show that this phenomenon can be captured with ‘normal’ syntactic processes, like ellipsis, c-command. The account makes predictions about how a language behaves based on the shape of its relative pronouns. And we see that the phenomenon is actually more wide-spread than what has been assumed.

In this introduction I first introduce what I mean exactly with case competition in headless relatives. Then I introduce the topics I discuss in this dissertation.

1.1 Introducing the title

First, case marks the grammatical role of the noun phrases. Case also appears on relative pronoun. Case on head can differ from case on relative pronoun. What

happens if there is no noun? Two cases come together on the relative pronoun. What holds for all languages: there is a fixed order of who wins the competition. Specific from language to language: when does the competition take place?

Languages can use case to mark the grammatical role of a noun phrase in a clause. Consider the two Modern German sentences in (1). The case marking of the noun phrases is reflected on the determiner in the noun phrase. In (1a), *der* in *der Lehrer* ‘the teacher’ is assigned nominative case, because it is the subject in the clause. *Den* in *den Schüler* ‘the pupil’ is assigned accusative case, because it is an object of *mag* ‘likes’. In (1b), the roles are reversed: *der* in *der Schüler* ‘the pupil’ is assigned nominative case, because it is the subject in the clause. *Den* in *den Lehrer* ‘the teacher’ is assigned accusative case, because it is the object of *mag* ‘likes’. The grammatical roles of the noun phrases in (1) can also be derived from the positioning in the clause. The subjects precede the predicate *mag* ‘likes’ and the objects follow it. As it is not relevant for the discussion here, I do not discuss the positioning of noun phrases in the clause into further detail.

- (1) a. Der Lehrer mag den Schüler.
 the.NOM teacher likes the.ACC student
 ‘The teacher likes the pupil.’
 b. Der Schüler mag den Lehrer.
 the.NOM student likes the.ACC
 ‘the pupil likes the teacher.’

Not only full noun phrases, but also other elements can be marked for case, such relative pronouns. Modern German marks relative pronouns, just like full noun phrases, for the grammatical role they have in the clause. Consider the two sentences in (2). These two sentences both consist of a main clause that is modified by a relative clause, which is placed between brackets. In (2a), the relative clause *der nach draußen guckt* ‘that looks outside’ modifies *den Schüler* ‘the pupil’. *Den Schüler* ‘the pupil’ is called the head (noun) or the antecedent of the relative clause. *Den* in *den Schüler* ‘the pupil’ is assigned accusative case, because it is the object of *mag* ‘likes’ in the main clause. The relative pronoun *der* ‘that.NOM’ is assigned nominative case, because it is the subject of in the relative clause.

In (2b), the relative clause *den er beim Verstecktspiel sucht* ‘that he is searching for playing hide-and-seek’ modifies *den Schüler* ‘the pupil’. *Den* in *den Schüler* ‘the pupil’ is again marked as accusative, because it is the object of *mag* ‘likes’ in the main clause. The relative pronoun *den* ‘that.ACC’ is assigned accusative case, because it is the object of *sucht* ‘searches’ in the relative clause.

- (2) a. Der Lehrer mag den Schüler, [der nach draußen guckt].
 the.NOM teacher likes the.ACC student that.NOM to outside looks
 ‘The teacher likes the pupil that is looking outside.’
 b. Der Lehrer mag den Schüler, [den er beim
 the.NOM teacher likes the.ACC student that.ACC he at the
 Verstecktspiel sucht].
 hide-and-seek game searches
 ‘The teacher likes the pupil that he is searching for playing hide-and-seek.’

Compare the two sentences in (2). In both sentences the head is marked accusative because it is the object in the main clause. The case of the relative pronoun in (2b) is also accusative, because of it is the object in the relative clause. The case of the relative pronoun in (2a) differs from the case of the head, it is nominative.

The focus of this dissertation lies on the headless relative, i.e. a relative clause that does not have a head. As the name suggests, this type of relative clause lacks a head.¹ Consider the Gothic example of a headless relative in (2). I placed subscripts between the square brackets on the glosses of verbs. They indicate which case the verbs assign to their object. In (2), the relative clause *þan -ei arma* ‘who I pity’ is placed between square brackets. There is no head that this relative clause modifies, it is a headless relative. This is different from the examples from German I gave above, which each had a head. The relative pronoun *þan(a)* ‘who.ACC’ is assigned accusative case.²

¹ This ‘missing noun’ has been interpreted in two different ways. Some researchers argue that the noun is truly missing, it is absent, cf. Van Riemsdijk 2006. Others claim that there is actually a head, but it is phonologically zero, Himmelreich 2017. At this point in the discussion this distinction is not relevant. I return to the issue in Chapter 5.

² The relative pronoun without the complementizer *-ei* is *þana*. Therefore, I refer to the relative

- (3) gaarma [þan -ei arma]
 pity_[ACC] who.ACC -COMP pity_[ACC]
 ‘I will pity (him) whom I pity’ (Gothic, Rom. 9:15, after Harbert 1978: 339)

Where does this accusative case assignment come from? Logically speaking, there are two candidates: the predicate in the main clause *gaarma* ‘pity’ and the predicate in the relative clause *arma* ‘pity’. Did the predicate in the relative clause *arma* ‘pity’ assign accusative case? In the headed relative clauses in (2), the relative pronoun received its case from the predicate in the relative clause. The crucial difference with that type of relative clause is that there is a head for the main clause to assign its case to. Did the predicate in the main clause *gaarma* ‘pity’ assign accusative case? I will argue that both of them did. (2) is indeed the first example I gave of case competition in a headless relative. It is an uninteresting one, because the two competing cases are identical.

In the remainder of this section I show evidence for the claim that there is case competition going on in headless relatives. I illustrate that relative pronouns can take the case assigned from within the relative clause or the case assigned from outside the relative clause (the main clause).

Consider the example in (4). In this example there is a subscript on a preposition, indicating that this is the element that assigns the case. The relative clause is placed between squared brackets. The preposition *ana* ‘on’ is part of the relative clause, and it assigns dative case. The predicate *ushafjands* ‘picking up’ is not part of the relative clause but it is situated in the main clause. This predicate assigns accusative case. The relative pronoun *þamm(a)* appears in the dative case. This dative can only be assigned by the preposition *ana* ‘on’, which is part of the relative clause.

- (4) ushafjands [ana þamm -ei lag]
 picking up_[ACC] on_[DAT] what.DAT -COMP lay
 ‘picking up (that) on which he lay’
 (Gothic, Luke 5:25, after Harbert 1978: 343)

The conclusion that follows is that in headless relatives the relative pronoun can
 pronoun as *þan(a)*.

Now consider the example in (5). The relative clause is placed between squared brackets. The predicate *qipib* ‘say’ is part of the relative clause, and assigns accusative case. The predicate *taujaui* ‘do’ is not part of the relative clause but it is situated in the main clause. This predicate assign dative case. The relative pronoun *pamm(a)* appears in the dative case. This dative can only be assigned by the predicate *taujaui* ‘do’, which is part of the main clause.

- The conclusion that follows is that in headless relatives the relative pronoun takes the case assigned in the main clause. Again, it is unclear at this point what happened to the accusative case, which is now assigned by the predicate in the relative clause.

1.2 The content of this dissertation

In the previous section I introduced the notion of case competition, and I illustrated how it appears in headless relatives. This dissertation discusses two questions regarding this phenomenon. The first one is which case is going to win the case competition, i.e. which case surfaces. I discuss this in Part I. The second question is whether both competitors are able to compete in the competition, i.e. whether one of the cases is surfacing or both are ungrammatical. I discuss this in Part II. For both I will show that morphology is leading. What we observe in syntax is a reflex

of the morphology.

In Part I I discuss the pattern observed in headless relatives in Gothic. This pattern has also been described for German, Greek, etc. etc. references references. The pattern that arises in headless relatives is not restricted to headless relatives. It can also be observed in another syntactic phenomenon: the accessibility hierarchy. This is.. Lastly: the pattern we observe in these two syntactic phenomena is what we know from morphology. I discuss patterns in morphology: formal containment, syncretism patterns, suppletion patterns.

In Part I I discuss an aspect of headless relatives that differs per language. That is, not all languages act like Gothic.

(6) Modern German

- a. accusative dative

“

- b. dative accusative

“

(7) Old High German

- a. accusative dative

“

- b. dative accusative

“

(8) Italian

- a. accusative dative

“

- b. dative accusative

“

So far people said.. I connect this crosslinguistic variation to morphology.. so i reduce it to differences in the lexicon

In Part III I show how all of this can be derived in derivations.

Part I

The winner of the competition

Chapter 2

A reoccurring pattern

Start with the main focus of this dissertation A phenomenon goes parallel with the ordering

2.1 Case competition in Gothic headless relatives

In the introduction I already showed accusative vs. dative, and dative always won. Here I additionally add nominative. I will show that ordering of strength is nom-acc-dat.

First some terminology. Intern Extern

Table 2.1: Case attraction in headless relatives - empty

Chapter 3

Case decomposition meets ellipsis

The problem: so far people that account for headless relatives have made reference to this case hierarchy. they put them in their OT tables, let the fly in from the left in their syntax, whatever. What I want to do is unify all the instances of nom-acc-dat. I put nom-acc-dat in syntax. which is morphology.

3.1 Problem with previous analyses of headless relatives

The problem: so far people that account for headless relatives have made reference to this case hierarchy. they put them in their OT tables, let the fly in from the left in their syntax, whatever.

What I do is start is start from morphology. There we have complex case: dat - acc - nom. What we see in syntax is a by-product of the morphology, it's a consequence, it's an indirect relation. cause and effect if the morphology is different, than so will the syntax

(8) INT:NOM, EXT:ACC

- a. *Ich lade ein, [wer mir sympathisch ist].
 I invite_[ACC] who.NOM me nice is_[NOM]
 ‘I invite who I like.’ (Vogel 2001: 344)
- b. *Ich lade ein, [wen mir sympathisch ist].
 I invite_[ACC] who.ACC me nice is_[NOM]
 ‘I invite who I like.’ (Vogel 2001: 344)

(9) INT:NOM, EXT:DAT

- a. *Ich vertraue, [wer Hitchcock mag].
 I trust_[DAT] who.NOM Hitchcock likes_[NOM]
 ‘I trust who likes Hitchcock.’ (Vogel 2001: 345)
- b. *Ich vertraue, [wem Hitchcock mag].
 I trust_[DAT] who.DAT Hitchcock likes_[NOM]
 ‘I trust who likes Hitchcock.’ (Vogel 2001: 345)

(10) INT:ACC, EXT:NOM

- a. Uns besucht [wen Maria mag].
 Us visits_[NOM] who.ACC Maria.NOM likes_[ACC]
 'Who visits us likes Maria likes.' (Vogel 2001: 343)
- b. *Uns besucht [wer Maria mag].
 Us visits_[NOM] who.NOM Maria.NOM likes_[ACC]
 'Who visits us likes Maria likes.' (Vogel 2001: 343)
- (11) INT:ACC, EXT:DAT
- a. *Ich vertraue [wem auch Maria mag].
 I trust_[DAT] who.DAT also Maria likes_[ACC].
 'I trust whoever Maria also likes.' (Vogel 2001: 345)
- b. *Ich vertraue [wen auch Maria mag].
 I trust_[DAT] who.ACC also Maria likes_[ACC].
 'I trust whoever Maria also likes.' (Vogel 2001: 345)
- (12) INT:DAT, EXT:NOM
- a. Uns besucht [wem Maria vertraut].
 us visits_[NOM] who.DAT Maria trusts_[DAT]
 'Who visits us, Maria trusts.' (Vogel 2001: 343)
- b. *Uns besucht [wer Maria vertraut].
 us visits_[NOM] who.NOM Maria trusts_[DAT]
 'Who visits us, Maria trusts.' (Vogel 2001: 343)
- (13) INT:DAT, EXT:ACC
- a. Ich lade ein [wem auch Maria vertraut].
 I invite_[ACC] who.DAT also Maria trusts_[DAT].
 'I invite whoever Maria also trusts.' (Vogel 2001: 344)
- b. *Ich lade ein [wen auch Maria vertraut].
 I invite_[ACC] who.ACC also Maria trusts_[DAT].
 'I invite whoever Maria also trusts.' (Vogel 2001: 344)

ACC	þ-ō-ei	þ-anz-ei	þ-ōz-ei
DAT	þ-áim-ei	þ-áim-ei	þ-áim-ei

4.2.1.2 Light-headed relatives

D, D + COMP

4.2.2 Old High German

4.2.2.1 Headless relatives

D

Table 4.7: Relative pronouns in headless relatives in OHG

	N.SG	M.SG	F.SG
NOM	d-az	d-ēr	d-iu
ACC	d-az	d-ēn	d-ea/-ia/(-ie)
DAT	d-ēmu/-ēmo	d-ēmu/-ēmo	d-ēru/-ēro
	N.PL	M.PL	F.PL
NOM	d-iu/-ei	d-ē/-ea/-ia/-ie	d-eo/-io
ACC	d-iu/-ei	d-ē/-ea/-ia/-ie	d-eo/-io
DAT	d-ēm/-ēn	d-ēm/-ēn	d-ēm/-ēn

4.2.2.2 Light-headed relatives

D, D

Wouldn't we now not expect that Modern German patterns with Old High German wrt attraction in headed constructions. Yes, we would. And yes, this is exactly what we see. Paper by Bader on case attraction.

4.2.3 Modern German

4.2.3.1 Headless relatives

WH

Table 4.8: Relative pronouns in headless relatives in MG

	INAN	AN
NOM	w-as	w-er
ACC	w-as	w-en
DAT	-	w-em

4.2.3.2 Light-headed relatives

Pattern in light-headed relatives: D, D

4.2.4 Italian

4.2.4.1 Headless relatives

WH: *che*

4.2.4.2 Light-headed relatives

D, WH: *quello, che*

4.3 Bringing this together

Table 4.9: Variation and relative pronoun shape

	rel pron in headless rel	rel prons in light-headed rel	INT>EXT	EXT>INT
Gothic	A + C	A + A + C	✓	✓
OHG	A	A + A	*	✓
MG	B	A + A	✓	*
Italian	B	A + B	*	*

And how can we now derive this?

Chapter 5

Connecting morphology and syntax

5.1 Background: relative clause theory

Standard raising, probably Cinque's double-headed structures

5.2 Analysis

5.2.1 Old High German

In OHG, proper attraction in headless relatives can be derived from headed relatives. The relative pronoun is the determiner from the main clause. Under a double-headed Cinque-analysis, it is the internal DP that is deleted.

(1) DAT instead of ?

- a. was allon them ando, them thar quamun at erist tuo
what all d.DAT do to d.DAT there x as first do?
,

than is im so them salte them (the M) man bi seuues Stade oido teuuirpit, 1370.

Hon them erlscipie them thar inne uuas, 2768.

allon them ando them thar quamun at erist tuo, 3435.

fon them herrosten them thes hnses giuueld, 3344 C.
 sagda them alat them (the M) thar all giscaop, 4636. —

(2) ACC instead of NOM

- a. unde ne wolden níet besên den mort den dô was
 and not wanted not see the murder.ACC that.ACC there had
 geschên
 happened
 ‘and they didn’t want to see the murder that had happened.’
 (MHG, Nib. 1391,14, Behaghel 1923-1932: 756, after Pittner 1995: 198)

5.2.2 Modern German

In German, inverse attraction in headed relatives can be shown to be very different from inverse attraction in headless relatives. I am not set on an analysis yet. Under a double-headed Cinque-analysis, it is the external DP that is deleted. Grafting is also still an option.

5.2.3 Gothic

In Gothic, ?

Part III

Details

Chapter 6

Technical implementation

6.1 Background

- (1) **The Superset Principle** Starke (2009):
A lexically stored tree matches a syntactic node iff the lexically stored tree contains the syntactic node.
- (2) **The Elsewhere Condition** (Kiparsky 1973, formulated as in Caha 2019):
When two entries can spell out a given node, the more specific entry wins. Under the Superset Principle governed insertion, the more specific entry is the one which has fewer unused features.
- (3) **Spellout Algorithm:**
Merge F and
 - a. Spell out FP.
 - b. If (a) fails, attempt movement of the spec of the complement of F, and retry (a).
 - c. If (b) fails, move the complement of F, and retry (a).

When a new match is found, it overrides previous spellouts.

- (4) **Cyclic Override** (Starke, 2018):
Lexicalisation at a node XP overrides any previous match at a phrase contained in XP.

If the spellout procedure in (3) fails, backtracking takes place.

(5) **Backtracking** (Starke, 2018):

When spellout fails, go back to the previous cycle, and try the next option for that cycle.

If backtracking also does not help, a specifier is constructed.

(6) **Spec Formation** (Starke, 2018):

If Merge F has failed to spell out (even after backtracking), try to spawn a new derivation providing the feature F and merge that with the current derivation, projecting the feature F at the top node.

6.2 Derivations
