Chapter 1

Introduction

This dissertation is about case competition, a situation in which two cases are assigned but only one of them surfaces. One of the constructions in which case competition appears is relative clauses that lack a head noun, i.e. headless relatives.

I show that one aspect about case competition in headless relatives holds for all languages (under discussion here at least). That is, there is a fixed order which decides which case wins the competition. Another aspect of case competition in headless relatives differs per language. That is, whether the competition takes place to begin with. I connect this variable to the morphology of the language in question.

This phenomenon has been described as some special property of a few special languages. Therefore, language-specific rules have been postulated to account for the data. My goal is to show that this phenomenon can be captured with ‘normal’ syntactic processes, like ellipsis, c-command. The account makes predictions about how a language behaves based on the shape of its relative pronouns. And we see that the phenomenon is actually more wide-spread than what has been assumed.

In this introduction I first introduce what I mean exactly with case competition in headless relatives. Then I introduce the topics I discuss in this dissertation.

1.1 The title

First, case marks the grammatical role of the noun phrases. Case also appears on relative pronoun. Case on head noun can differ from case on relative pronoun. What

happens if there is no noun? Two cases come together on the relative pronoun. What holds for all languages: there is a fixed order of who wins the competition. Specific from language to language: when does the competition take place?

Languages can use case to mark the grammatical role of a noun phrase in a clause. Consider the two Modern German sentences in (1). The case marking of the noun phrases is reflected on the determiner in the noun phrase. In (1a), *der* in *der Lehrer* ‘the teacher’ is assigned nominative case, because it is the subject of *mag* ‘likes’. *Den* in *den Schüler* ‘the pupil’ is assigned accusative case, because it is an object of *mag* ‘likes’. In (1b), the roles are reversed: *der* in *der Schüler* ‘the pupil’ is assigned nominative case, because it is the subject of *mag* ‘likes’. *Den* in *den Lehrer* ‘the teacher’ is assigned accusative case, because it is the object of *mag* ‘likes’. The grammatical roles of the noun phrases in (1) can also be derived from the positioning in the clause. The subjects precede the predicate *mag* ‘likes’ and the objects follow it. As it is not relevant for the discussion here, I do not discuss the positioning of noun phrases in the clause into further detail.

- (1) a. Der Lehrer mag den Schüler.
 the.NOM teacher likes the.ACC student
 ‘The teacher likes the pupil.’
 b. Der Schüler mag den Lehrer.
 the.NOM student likes the.ACC
 ‘the pupil likes the teacher.’

Not only full noun phrases, but also other elements can be marked for case, such relative pronouns. Modern German marks relative pronouns, just like full noun phrases, for the grammatical role they have in the clause. Consider the two sentences in (2). These two sentences both consist of a main clause that is modified by a relative clause, which is placed between brackets. In (2a), the relative clause *der nach draußen guckt* ‘that looks outside’ modifies *den Schüler* ‘the pupil’. *Den Schüler* ‘the pupil’ is called the head (noun) or the antecedent of the relative clause. *Den* in *den Schüler* ‘the pupil’ is assigned accusative case, because it is the object of *mag* ‘likes’ in the main clause. The relative pronoun *der* ‘that.NOM’ is assigned nominative case, because it is the subject of *guckt* ‘looks’ in the relative clause.

In (2b), the relative clause *den er beim Verstecktspiel sucht* ‘that he is searching for playing hide-and-seek’ modifies *den Schüler* ‘the pupil’. *Den* in *den Schüler* ‘the pupil’ is again marked as accusative, because it is the object of *mag* ‘likes’ in the main clause. The relative pronoun *den* ‘that.ACC’ is assigned accusative case, because it is the object of *sucht* ‘searches’ in the relative clause.

- (2) a. Der Lehrer mag den Schüler, [der nach draußen guckt].
 the.NOM teacher likes the.ACC student that.NOM to outside looks
 ‘The teacher likes the pupil that is looking outside.’
- b. Der Lehrer mag den Schüler, [den er beim
 the.NOM teacher likes the.ACC student that.ACC he at the
 Verstecktspiel sucht].
 hide-and-seek game searches
 ‘The teacher likes the pupil that he is searching for playing hide-and-seek.’

Notice something about the two sentences above. So, the case of the head noun *den Schüler* ‘the pupil’ differs from the case of the relative pronoun *der* ‘that.NOM’, because they each have their own grammatical function in their clauses. Here both the head noun *den Schüler* ‘the pupil’ and the relative pronoun *der* ‘that.ACC’ are both marked for accusative, because of their grammatical roles in their respective clauses.

The construction under investigation in this dissertation is a headless relative, i.e. a relative clause that does not have a head noun. As the name suggests, this type of relative clause lacks a head noun.¹ Consider the Gothic example of a headless relative in (3). The subscripts between [] indicate the case verbs require on the headless relative pronoun. The relative clause *þan -ei arma* ‘who I pity’ is placed between brackets. There is no head for this relative clause. The relative pronoun *þan(a)* ‘who.ACC’ is assigned accusative case.² Where did the relative pronoun get

¹ This ‘missing noun’ has been interpreted in two different ways. Some researchers argue that the noun is actually absent, cf. Van Riemsdijk 2006. Others claim that there is actually a head noun, but it is phonologically zero, Himmelreich 2017. At this point in the discussion it is irrelevant which of the two is correct. I return to this issue in Chapter 5.

² The relative pronoun without complementizer *-ei* is *þana*, so I write *(a)* behind *þan* in the text.

its case from? From the predicate in the embedded clause, just as in the headed relatives? And what about the predicate in the main clause, what does this do with its case? In the headed example there was the head that carried received the case, but now there is only a single location. The example here does not help us any further, because both predicates assign accusative.

- (3) gaarma [pan -ei arma]
 pity_[ACC] who.ACC -COMP pity_[ACC]
 ‘I will pity him whom I pity’ (Gothic, Rom. 9:15, after Harbert 1978: 339)

We need an example in which the predicates assign different cases. first, let’s see what happens if we put a dative in the relative clause. main remains accusative. ha! relative pronoun becomes dative. accusative is wrong here.. only because of absence of data.

- (4) ushafjands [ana þamm -ei lag]
 picking up_[ACC] on_[DAT] what.DAT -COMP lay
 ‘picking up that on which he lay’
 (Gothic, Luke 5:25, after Harbert 1978: 343)

ok, dan hupsa dative there. seems that main clause also plays a role! whuuuut!

- (5) hva nu wileiþ ei taujau [þamm -ei qipip þiudan Iudaie]
 what now want that do_[DAT] who.DAT -COMP say_[ACC] king of Jews
 ‘what now do you wish that I do to him whom you call King of the Jews?’
 (Gothic, Mark 15:12, after Harbert 1978: 339)

conclusion: there is case competition in these examples. and we saw: between accusative and dative, dative always wins.

1.2 Three parts

first, what holds for all languages is that there is a single order: highest in the hierarchy wins in the first part, I..

secondly I address an aspect that differs across languages that is, not all languages are like gothic I connect this crosslinguistic variation to morphology.. so i reduce it to differences in the lexicon

finally, i show how all of this can be derived in derivations

Part I

The constant case complexity

Chapter 2

A reoccurring pattern

2.1 Case competition in Gothic headless relatives

(1) INT:NOM, EXT:ACC

a. NOM not attested

b. jah [þo -ei ist us Laudeikaion] jus ussiggwaid
and what.ACC -COMP is_[NOM] from Laodicea you read_[ACC]
'and read that which is from Laodicea'

(Gothic, Col. 4:16, after Harbert 1978: 357)

(2) INT:NOM, EXT:DAT

a. NOM not attested

b. [þaim -ei iupa sind] fraþjaiþ
what.DAT -COMP above are_[NOM] think on_[DAT]
'set your mind on those which are above'

(Gothic, Col. 3:2, after Harbert 1978: 339)

(3) INT:ACC, EXT:NOM

a. [þan -ei frijos] siuks ist
who.ACC -COMP love_[ACC] sick is_[NOM]
'the one whom you love is sick'

(Gothic, John 11:3, after Harbert 1978: 342)

b. NOM not attested

- (4) INT:ACC, EXT:DAT
- a. ACC not attested
- b. hva nu wileiþ ei taujau [þamm -ei qiþiþ þiudan Iudaie]?
 what now want that do_[DAT] who.DAT -COMP say_[ACC] king of Jews
 ‘what now do you wish that I do to him whom you call King of the
 Jews?’ (Gothic, Mark 15:12, after Harbert 1978: 339)
- (5) INT:DAT, EXT:NOM
- a. iþ [þamm -ei leitiþ fraletada] leitiþ frijod
 but who.DAT -COMP little is forgiven_[DAT] little loves_[NOM]
 ‘but the one whom little is forgiven loves little’
 (Gothic, Luke 7:47, after Harbert 1978: 342)
- b. NOM not attested
- (6) INT:DAT, EXT:ACC, is with a preposition
- a. ushafjands [ana þamm -ei lag]
 picking up_[ACC] on_[DAT] what.DAT -COMP lay
 ‘picking up that on which he lay’
 (Gothic, Luke 5:25, after Harbert 1978: 343)
- b. ACC not attested

And how can we now derive this?

Chapter 5

Connecting morphology and syntax

5.1 Background: relative clause theory

Standard raising, probably Cinque's double-headed structures

5.2 Analysis

5.2.1 Old High German

In OHG, proper attraction in headless relatives can be derived from headed relatives. The relative pronoun is the determiner from the main clause. Under a double-headed Cinque-analysis, it is the internal DP that is deleted.

(1) ACC instead of NOM

- a. unde ne wolden níet besên den mort den dô was
and not wanted not see the murder.ACC that.ACC there had
geschên
happened
'and they didn't want to see the murder that had happened.'
(MHG, Nib. 1391,14, Behaghel 1923-1932: 756, after Pittner 1995: 198)

5.2.2 Modern German

In German, inverse attraction in headed relatives can be shown to be very different from inverse attraction in headless relatives. I am not set on an analysis yet. Under a double-headed Cinque-analysis, it is the external DP that is deleted. Grafting is also still an option.

5.2.3 Gothic

In Gothic, ?

Part III

Details

Chapter 6

Technical implementation

6.1 Background

- (1) **The Superset Principle** Starke (2009):
A lexically stored tree matches a syntactic node iff the lexically stored tree contains the syntactic node.
- (2) **The Elsewhere Condition** (Kiparsky 1973, formulated as in Caha 2019):
When two entries can spell out a given node, the more specific entry wins. Under the Superset Principle governed insertion, the more specific entry is the one which has fewer unused features.
- (3) **Spellout Algorithm:**
Merge F and
 - a. Spell out FP .
 - b. If (a) fails, attempt movement of the spec of the complement of F , and retry (a).
 - c. If (b) fails, move the complement of F , and retry (a).

When a new match is found, it overrides previous spellouts.

- (4) **Cyclic Override** (Starke, 2018):
Lexicalisation at a node XP overrides any previous match at a phrase contained in XP .

If the spellout procedure in (3) fails, backtracking takes place.

(5) **Backtracking** (Starke, 2018):

When spellout fails, go back to the previous cycle, and try the next option for that cycle.

If backtracking also does not help, a specifier is constructed.

(6) **Spec Formation** (Starke, 2018):

If Merge F has failed to spell out (even after backtracking), try to spawn a new derivation providing the feature F and merge that with the current derivation, projecting the feature F at the top node.

6.2 Derivations

Chapter 7

Conclusion

Primary texts

Col.	Colossians, New Testament
Isid.	Der althochdeutsche Isidor
John	John, New Testament
Luke	Luke, New Testament
Mark	Mark, New Testament
Mons.	The Monsee fragments
Nib.	Das Nibelungenlied
Otfrid	Otfrid's Evangelienbuch
Rom.	Romans, New Testament
